ABSTRACT

This is the abstract of my paper. It contains 100-200 words and is treated as a major section of the paper. The section heading is in 12 point Times Roman bold capital letters and is preceeded and followed by one blank line. Following the abstract is a list of keywords that is formated as follows. The asterick following the section command allows you to have unnumbered sections.

Keywords: Keyword1, Keyword2, ... Keyword6

1 INTRODUCTION

Here is my introduction text. There is a blank line before the section heading and one afterwards. Heading text is 12-point bold capital letters. Paragraphs are indented and there is a blank line following each paragraph. You may or may not number the sections and subsections.

1.1 Previous Work

In subsections there is 1 blank line before the section heading and one afterwards. Heading text is 12 point bold font with the first letter of each word capitalized.

Throughout I may cite references of the form [1] or [2], and LaTeX will keep track of numbering. The numbers are based on the order you place them in the bibliography, not the order they appear in the text. They will appear in alphabetical order. LaTex will put square brackets about the number within the text of your paper. For those of you new to the bibliography package, you may have to run the latex process twice to allow all references to be resolved. You will get a warning about a missing .aux file. Just rerun latex and it will be ok.

2 SUMMARY AND CONCLUSIONS

This template will get you through the minimum article, i.e. no figures or equations. To include those, please refer to your LaTeX manual and the publications guidelines. Good Luck!

ACKNOWLEDGEMENTS

This is how to do an unnumbered section, which comes out in 12 point bold font. Note that the acknowlegements section is optional.
